

Just One Penny

In 20 Years

That's how much gas prices would come down if oil drilling were allowed in America's Arctic Wildlife Refuge.

According to new data from the U.S. Department of Energy, drilling for oil in the Arctic Refuge would only lower gas prices by about one penny per gallon.

In 20 years.

But that isn't stopping Tom DeLay and other Washington politicians from pressuring New Jersey Congressman Mike Ferguson to support drilling for oil in America's premier wildlife refuge.

For years, Congressman Ferguson has helped protect the Arctic Refuge from oil drilling, because he knows that it is important to save special places like the Refuge for future generations. He also knows that drilling in the Refuge won't ease prices at the pump.

A final, decisive vote on whether to allow drilling in the Refuge is imminent.

**Please call Congressman Ferguson
at 908-757-7835.**

**Ask him to vote NO on any legislation
that would legalize oil drilling in America's Arctic Refuge.**
